

Enterprise Growth OS - Architecture V2 (CrewAI)

Layer-wise Responsibilities

1. Presentation Layer

Next.js

Responsible for

- Business onboarding
- Dashboard
- AI Copilot
- Reports
- Charts
- User Authentication

2. Backend Layer

FastAPI

Responsible for

- APIs

- Authentication
- File Upload
- Database Communication
- CrewAI Invocation

3. Business Context Builder

This is a new layer.

Instead of immediately sending the request to AI,
collect

Business Profile

+

Uploaded Documents

+

Current KPIs

+

Previous Strategies

+

Business Goals

↓

Business Context

Now every AI agent works with the same context.

4. Executive Orchestrator (CrewAI)

Instead of

CEO = Chatbot

CEO becomes

Planner

Task Distributor

Agent Coordinator

Workflow Controller

Decision Approver

The CEO never generates marketing plans.

It delegates.

5. Strategy Layer

Responsible for

SWOT

Business Analysis

Market Analysis

Growth Targets

Business Objectives

Success Metrics

Output

6. Intelligence Layer

Contains

RAG

Business Analytics

Market Trends

Financial Analytics

Customer Analytics

External Knowledge

Instead of

Agent

↓

Gemini

we now have

Agent

↓

Retriever

↓

Knowledge

↓

Gemini

Much better.

7. Memory Layer

Stores

Previous Campaigns

Previous KPIs

Past Recommendations

Business Discussions

Customer History

Business Growth Timeline

This enables

Develop

↓

Dominate

from the sponsor's workflow.

Specialized Business Crew

Each CrewAI Agent has

Role

Goal

Tools

Memory

Task

Output

Marketing

Produces

Marketing Strategy

Campaign Ideas

SEO Plan

Content Strategy

Lead Generation

Sales

Produces

Sales Funnel

Conversion Strategy

Lead Prioritization

↓

Memory

↓

END

Why V2 is stronger than V1

V1

CEO only delegates

Agents call LLM directly

Strategy as a single agent

Dashboard displays outputs

No explicit context building

V2

CEO plans, orchestrates, approves

Agents use shared context, knowledge, and memory

Strategy becomes a reusable system layer

Dashboard is driven by KPI analytics

Dedicated Business Context Builder

V1

Basic agent collaboration

Ends at dashboard

V2

Decision Evaluation Engine resolves conflicts

Continuous feedback updates memory

My one additional suggestion (a potential V2.1)

I would insert a **Tool Layer** between the Specialized Business Crew and the external world.

Specialized Business Crew

Tool Layer

Decision Evaluation Engine

This gives every agent access to **capabilities**, not just the LLM. During judging, you can say:

"Our agents don't simply generate text. They invoke business tools, retrieve enterprise knowledge, perform calculations, and then collaborate to produce explainable business decisions."

That is much closer to the "AI-powered Business Growth Operating System" described in the sponsor brief than a collection of prompt-driven agents.
